EDUCATION

Boston University, College of Engineering

Bachelor of Science in *Computer Engineering*

GPA: 3.79/4.00

Boston, MA

Expected May 2026

RELEVANT COURSEWORK

Applied Algorithms and Data Structures, Logic Design, Statistics & Data Science, Engineering Mechanics, Electric Circuits, Discrete Math, Hands-On Hardware Engineering

SKILLS

Languages: Python, C++, C#, Go, Java, Swift.

Tools: Git, Linux, Unreal Engine, Unity, Maya, Figma, CUDA, Flask, Docker, Verilog, Onshape.

Libraries/API: OpenCV, Pytorch, Tensorflow, Arduino, Raspberry Pi, ChatGPT API, Azure TTS API, OpenAI Whisper.

EXPERIENCE

Universal Creative (NBCUniversal)

Orlando, FL

R&D Software Engineering Intern, Advanced Technology Interactive (ATI)

January 2024 - August 2024

- Worked in ATI **R&D** department, researched new interactive technology, contributed to design, iteration, and testing for **blue-sky project** for Universal park attraction innovation.
- Improved **reinforcement learning tasks** and configurations for quadruped robot locomotion and stylized physics-based character control training (AMP).
- **Trained and deployed** policy for robot **Sim2Real (NVIDIA Isaac Lab)**, collaborated with NVIDIA SA team, improved locomotion and training efficiency.
- Contributed to **GenAI initiative** to design a high-fidelity metahuman with custom groom in **Maya XGen**, integrated and shipped in Unreal Engine, work demoed at **major internal company event**.
- Designed and streamlined **conversational Metahuman**, created conversation experience with fully-rigged facial lip-syncing animation and speech generated on runtime.
- Proposed and led **independent project**, designed timeline and successfully applied for **R&D funding**.
- Presented project to company executive, prototype was taken to next production phase, and patent is under evaluation.
- Designed various **internal tools** using Python, C++, **Flask**, accelerated project iterative efficiency **by 200%**.

PROJECTS

Game Design & Production, Multiple Personal Projects

September 2022 - January 2024

- **Self-taught** game design principles, using **Unreal Engine, Unity** to produce, deploy and publish **5 diverse games**.
- **Scouted VFX, SFX talent** from online community, **led 4-person team** to strategize project plan, generated proposals, created development timeline, checked-in task fulfillment progress, **ensured project completion** within tight time frame.

MarsRover Autonomous Navigation, BU MarsRover Club Software Team

September 2023 - December 2023

- Oversaw vision-related tasks for autonomous navigation, object recognition, terrain mapping.
- Strategized, **researched**, selected components, assembled and test in simulation, **mentored** junior team members.
- Collaborated with mechanical, life detection, and electrical teams, tested vision systems, ensured smooth integration.

Android Mobile App, Boston University, Software Engineering Course

January 2023 - May 2023

- **Led 5-person team**, built mobile game using **Android Studio**, collaborated using Git Lab for version control.
- Developed **30% backend** game mechanics and **50% frontend** features, **optimized user experiences** by testing on virtual simulator and physical android devices to ensure maximum device compatibility;
- Presented to the class and the professor, **ranked NO.1** on student-body rating, **received perfect score** on final project.

Product Design: Gamified Finance App, Boston University Product Management Club

September 2023 - December 2023

- Brainstormed **original app idea** within 4-member product team, conducted **market and customer research**, identified competitors and targeted audiences to ensure building a scalable product with promising user base.
- Facilitated in-group discussion, outlined problem statements, product prompts, and value propositions to clarify objectives.
- Outlined **feature prioritization** with MaSCoW method and delegated tasks.
- Designed **high-fidelity app UI** prototype using **Figma**, pitched to panel of judges, **placing #1** in mock business evaluation.

Awards & Activities

Dean's List, Boston University

BU MarsRover Club, member

Unity Developer Community Game Jam #25 - Game entry ranked **#1** Overall, **#1** in Theme, **#1** in Graphics, and **#1** in Innovation
